# INTRODUCTION

For use in façade and laminates State Enterprises manufactures and trades colored rivets as per customer specific requirements. The colored rivets provide better fastening and life long support to the wooden façades.

Facade rivets are available in both Head Paint (HP) and Full Paint (FP) profiles. On head paint rivets the color coating is on head of the blind rivets whereas on full paint rivets the color coating is on entire rivet body. The 4.8mm x 19.3mm colored rivets comes with large flange head of 16mm. The rivet body is of Alum 5154 grade and the mandrel of stainless steel 304 grade.

The stainless steel mandrel provides better grip and strength to the rivets for their long lasting performance. The biggest advantage of riveting facade panels is that a connection made by riveting is durable and secure. In contrast to screwed joints, there is no risk of the rivets coming loose over time due to impact or vibration. In addition, a blind rivet that has been set can be loaded immediately after it has been set. Even the scratch-resistant head coating is UV-resistant, so that the rivets hardly require any special care after installation.

Contact us now and get best quality colored rivets.
